Dry cleaning for sofas, mattresses and carpets

Professional low-moisture extraction cleaning service for sofas, upholstered furniture, mattresses and carpets in companies, hotels, local accommodation properties and professional spaces.

We use a technical low-moisture extraction cleaning process designed for surfaces that accumulate dust, signs of use and everyday dirt in professional environments

Suitable for different types of spaces

Suitable for operations that value presentation, consistency and care for frequently used spaces.

Companies

Reception areas, meeting rooms, waiting areas and corporate environments.

Hotels

Common areas, rooms, lounges and textile surfaces that support daily operations.

Local Accommodation Properties

Units that need to maintain a good presentation between bookings and through recurring use.

Espaços profissionais

Places where visual comfort, cleanliness and image maintenance are important.

Technical cleaning for frequently used textile surfaces

The service is carried out on-site and is especially useful for companies, hotels, local accommodation properties, waiting rooms, reception areas and other spaces where presentation and visual upkeep make a difference.

What we clean

Dry cleaning for sofas

For sofas in frequent use in offices, reception areas, local accommodation properties and common areas.

Mattress cleaning

For mattresses in local accommodation properties, hospitality environments and other professional settings that require hygiene and careful maintenance.

Carpet cleaning

Technical treatment for carpets with accumulated dust, signs of use and everyday dirt.

Upholstery cleaning

Armchairs, upholstered chairs and other textile surfaces integrated into the daily operation of the space.

How extraction cleaning works

A technical, objective, on-site process, with surface assessment, controlled action and a finishing stage focused on drying.

We organize the service into four stages to maintain consistency, provide a clear understanding of the process and ensure better control of the results on sofas, mattresses and carpets.

01

INITIAL ASSESSMENT

Surface assessment

We analyze the material, level of use and condition of the item before the service, in order to define the most suitable approach.

02

PREPARATION

Solution application

We apply the solution compatible with the surface and with the identified level of soiling, preparing the cleaning process in a controlled way.

03

TECHNICAL ACTION

Technical brushing

Brushing helps loosen dirt embedded in the fibers and improves the effectiveness of the extraction stage.

04

FINISHING

Extraction and finishing

We remove dirt and residual moisture with an extractor, completing the process with guidance on drying and use of the space.

Important information about the service

The term “dry cleaning” refers to a low-moisture process, not to the total absence of moisture.

Drying time varies depending on ventilation, material and the conditions of the space.

Not all stains can be completely removed.

The result depends on the type of fabric, the condition of the item and how long the dirt has remained.
